

# BELOW-GRADE POST FOUNDATIONS

**BUILD POST-SUPPORTED STRUCTURES  
*FASTER* WITH LESS HASSLE**

---

**CODE COMPLIANT FOR  
POST-FRAME BUILDINGS,  
DECKS, AND CRAWL SPACES**

**MADE  
IN USA**

# SUPERIOR TO CONCRETE

---

FootingPad® footings are easy to handle, quick to install, and engineered for lasting durability—unlike traditional concrete which is heavy, messy to mix, slow to cure, and prone to cracking.

Get the job done faster  
with the proven-performance  
of FootingPad®.

# WHY USE FOOTINGPAD®

---

## Lightweight and easy to use

FootingPad® is the only code compliant below-grade footing that is lightweight and easy to use.

## Reduces labor costs

No need to transport and mix heavy concrete on the jobsite.

## Easy to transport

Reduces transportation costs by eliminating pallets of heavy concrete footings or dry concrete.

## Lifetime warranty

# FEATURES AND BENEFITS

---

Engineered and third-party tested to be code compliant (ICC ESR-2147).

Eliminates hundreds of pounds of material to transport and handle.

No mixing of concrete or jobsite delays waiting for concrete to cure.

# FIVE SIZES AVAILABLE

---

## Support loads up to **9,327 lbs!**

FootingsPad® supports the same load as equal-sized concrete footing.

10"

12"

16"

20"

24"

# CODE COMPLIANCE

---

Independently tested and certified to meet International Code Council building code standards.

FootingPad® is ICC-ES-certified for post-frame buildings, decks, and crawl spaces.

The ICC-ES Evaluation Report (ESR-2147) can be downloaded from [footingpad.com/ICC](http://footingpad.com/ICC).

## IMPORTANT

**Provide a printed copy of the ESR report to your building inspector to show code compliance.**

# MULTIPLE USES

---

FootingsPad® is engineered and ICC-ES-certified to support solid wood posts, laminated columns, pre-cast concrete columns, concrete poured in Sonotubes, and crawl space jacks.

Solid wood post or laminated column

Perma-Column®

Sonotube

Crawl space jack

# SIZING FOOTINGS

**FootingPad® footings support the same loads as equal-sized concrete footings.**

Footing size selection must be based on both the load it will carry and the type of supporting soil. In an overload condition, failure occurs in the soil—not the footing. When overstressed, the footing settles as the underlying soil compresses or shears.

| DIAMETER | WEIGHT  | ALLOWABLE LOADS* |                |                |                |
|----------|---------|------------------|----------------|----------------|----------------|
|          |         | 1,500 PSF SOIL   | 2,000 PSF SOIL | 2,500 PSF SOIL | 3,000 PSF SOIL |
| 10"      | 1 lb.   | 810 lbs.         | 1,081 lbs.     | 1,351 lbs.     | 1,622 lbs.     |
| 12"      | 2 lbs.  | 1,126 lbs.       | 1,536 lbs.     | 1,946 lbs.     | 2,356 lbs.     |
| 16"      | 4 lbs.  | 2,009 lbs.       | 2,739 lbs.     | 3,470 lbs.     | 4,200 lbs.     |
| 20"      | 9 lbs.  | 2,687 lbs.       | 3,973 lbs.     | 5,259 lbs.     | 6,545 lbs.     |
| 24"      | 13 lbs. | 4,013 lbs.       | 5,784 lbs.     | 7,556 lbs.     | 9,327 lbs.     |

\*Maximum load based on the psf soil capacity noted

# EASY INSTALLATION

## 1 Dig the post hole

Dig post hole slightly wider than the FootingPad® diameter and deeper than the frostline or 24 inches deep (whichever is greater).

## 2 Level and compact the bottom

Use a 2x4 or other tool to level and compact the soil at the bottom of the hole.

## 3 Place the FootingPad®

Place FootingPad® in the bottom of the hole, smooth side down.

## 4 Place the post

Place post in the hole approximately centered on top of the FootingPad®.

## 5 Backfill

Backfill around the post with the original soil. No concrete required.

## 6 Compact soil and check alignment

Compact the backfill around the post every 12 inches as you fill the hole. Use a level to ensure the post is straight.

# FAQS

---

## What will my inspector say?

Inspectors recognize ICC-ES-certification and typically approve FootingPad® if sized correctly for the load of your structure. Provide ESR-2147 to your inspector, available on [footingpad.com](http://footingpad.com).

## What size do I need?

Size is determined by load and soil type. Use sizing charts and calculator on [footingpad.com](http://footingpad.com).

## What about lateral support?

Lateral (side-to-side) support is provided by the compacted backfilled soil.

## What if I don't want to put wood in the ground?

FootingPad® can be used with Perma-Column® pre-cast concrete posts or Sonotube concrete forms.

## What about uplift resistance?

Simple cleats attached to the post near the footing will provide uplift resistance.

### 1.0 EVALUATION SCOPE

Compliance with the following codes:

- 2024, 2021, 2018, 2015, and 2012 [International Building Code® \(IBC\)](#)
- 2024, 2021, 2018, 2015, and 2012 [International Residential Code® \(IRC\)](#)

Properties evaluated:

- Structural
- Durability

### 2.0 USES

The FootingPad® models FP-10, FP-12, FP-16, FP-20, and FP-24 are used as footings for the support of post columns in exterior locations or under-floor spaces in buildings of Type V construction under the IBC or any construction under the IRC. The FootingPad® post foundations are used as individual, isolated footings supporting gravity loads only.

### 3.0 DESCRIPTION

The FootingPad® models FP-10, FP-12, FP-16, FP-20, and FP-24 are molded composite footings manufactured from a proprietary composite of engineered polypropylene and fiberglass. The FootingPad® post foundations are circular, ribbed-plastic pads formed by an injection molding process. See [Figures 1, 2, 3, 4](#) and [5](#) for dimensions and rib configurations.

### 4.0 DESIGN AND INSTALLATION

#### 4.1 Design:

The FootingPad® post foundations are designed as shallow or surface rigid footings that transmit, uniformly to the supporting soil, the applied gravity load imposed by a minimum 3 1/2-inch by 3 1/2-inch (89 mm by 89 mm) post on the FP-10 pad, a minimum 3 1/2-inch-by-3 1/2-inch (89-mm-by-89-mm) post on the FP-12 pad, a minimum 4 1/2 inch by 5 1/2 inch (114 mm by 140 mm) post on the FP-16 pad, a minimum 4 1/2 inch by 5 1/2 inch (114 mm by 140 mm) post on the FP-20 pad and a minimum 4 1/2-inch-by-5 1/2-inch (114-mm-by-140-mm) post on the FP-24 pad. The posts must have a solid base bearing on the pads. Allowable loads are controlled by the type of supporting soil. The post foundations design load must not exceed the allowable gravity loads shown in [Table 1](#).

#### 4.2 Installation:

The post location or spacing must be determined by the loads imposed on the FootingPad® post foundation and the allowable load for the specific type of soil (see [Table 1](#)). If in a post application, the post hole must be slightly larger than the post foundation diameter and deep enough to satisfy all design requirements. The bottom of the hole must be flattened and leveled to provide a uniform bearing surface for the FootingPad® post foundation. The FootingPad® post foundations must be placed into the hole with the flat side down. The footing must be tamped until level and stable in the bottom of the hole. The square-cut-post end must be positioned as close as possible to the center of the FootingPad® post foundation and the post must be plumbed. The dirt around the post must be placed in 12-inch lifts (30.5 cm), tamping each lift before more soil is added.

#### 5.0 CONDITIONS OF USE:

The FootingPad® models FP-10, FP-12, FP-16, FP-20, and FP-24 described in this report comply with, or are suitable alternatives to what is specified in, those codes listed in Section 1.0 of this report, subject to the following conditions:

- 5.1 Installation must comply with this report, the applicable code and the manufacturer's published installation instructions. If there is a conflict between the manufacturer's installation instructions and this report, this report governs.
- 5.2 The FootingPad® post foundations are used to support post columns for Type V construction under the IRC or any construction under the IRC.
- 5.3 Exterior FootingPad® post foundations must be placed not less than 12 inches (305 mm) below the undisturbed ground surface (i.e., finished grade) in accordance with IBC Section 1809.4 and IRC Sections R403.1.4 and R507.3.2.
- 5.4 Exterior FootingPad® post foundations must be installed below the frost line of the locality unless protected from frost in accordance with IBC Section 1809.5 and IRC Sections R403.1.4.1 and R507.3.3. For installation in under-floor spaces such as crawl spaces in compliance with the IBC and IRC, the bottom of interior footings are permitted to be installed at finished grade unless otherwise required by IBC Section 1809.5 or IRC Section R403.1.4.1 for frost protection or by IBC Section 1805.1.2 or IRC Section R408.6 for surface or ground-water.
- 5.5 The FootingPad® post foundations must be used as individual isolated footings to resist bearing loads only and must not be used to resist lateral or uplift loads.
- 5.6 The design of the structure supported by the FootingPad® post foundations is outside the scope of this report.

#### 6.0 EVIDENCE SUBMITTED

Data in accordance with the [ICC-ES Acceptance Criteria for Molded Plastic Footing Pads \(AC49\)](#), dated August 2013 (editorially revised July 2024).

#### 7.0 IDENTIFICATION

- 7.1 Each FootingPad® post foundation must have a permanent label or etching including the name of the manufacturer, the model number, and the evaluation report number (ESR-2147).
- 7.2 The report holder's contact information is the following:

**TABLE 1— FOOTINGPAD® POST FOUNDATION ALLOWABLE LOADS (POUNDS)  
RELATED TO LOAD-BEARING PRESSURES OF FOUNDATION MATERIALS**

| FOOTINGPAD® MODEL | PAD DIAMETER | LOAD-BEARING PRESSURES OF FOUNDATION MATERIALS <sup>a</sup> |           |           |           |
|-------------------|--------------|-------------------------------------------------------------|-----------|-----------|-----------|
|                   |              | 1500 psf                                                    | 2000 psf  | 2500 psf  | 3000 psf  |
| FP-10             | 10 inch      | 810 lbs.                                                    | 1081 lbs. | 1351 lbs. | 1622 lbs. |
| FP-12             | 12 inch      | 1126 lbs.                                                   | 1536 lbs. | 1946 lbs. | 2356 lbs. |
| FP-16             | 16 inch      | 2009 lbs.                                                   | 2739 lbs. | 3479 lbs. | 4209 lbs. |
| FP-20             | 20 inch      | 2667 lbs.                                                   | 3973 lbs. | 5259 lbs. | 6545 lbs. |
| FP-24             | 24 inch      | 4013 lbs.                                                   | 5784 lbs. | 7556 lbs. | 9327 lbs. |

For SI: 1 inch = 25.4 mm; 1 lbf = 4.4 N; 1 lbf/ft<sup>2</sup> = 47.9 Pa.

1. Load-bearing pressures of foundation materials shall be determined using the presumptive load-bearing values in IBC Table 1806.2 or IRC R401.4.1, as applicable, or the load-bearing values shall be determined with a site-specific soil investigation, as required by the code official.
